

**Client** Europa Caravans

Europa Caravans are an established and successful manufacturer of caravans and mobile homes serving both the domestic and European markets.

**Critical Issue**

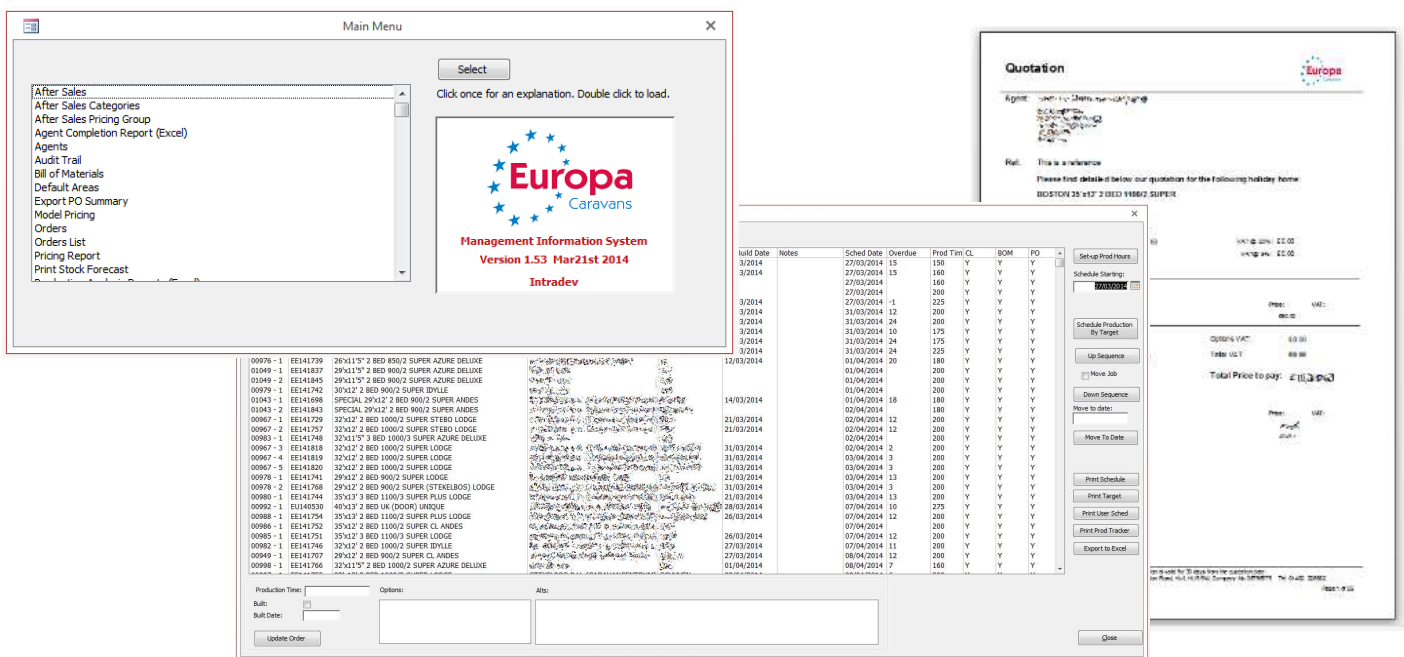

Manufacturing caravans is a complex process, involving a number of different manufacturing stages and a large amount of items that go to make up each caravan. Europa undertake a large amount of customisation of standard vans and create a lot of bespoke vans for their customers. Therefore any manufacturing software system needs to be flexible to ensure this style of production is catered for.

**Solution**

Intradev developed a bespoke manufacturing system that helps to manage the entire process including design, bill of material generation, sales orders, production scheduling, automated purchase orders generation and other areas. A variety of management reports are available to indicate how the business is performing.

**Results**

Implementation of the system has dramatically improved the efficiency of the manufacturing process, reduced the number of queries made by staff and reduced the amount of wastage.

“The systems that we have developed with Intradev have helped both Europa and me personally. The business has reduced levels of re-work which was a problem with the old manual system and I have more time to concentrate on managing production and working on keeping our quality levels high, rather than on ordering and paperwork.”

**Graham Oades, Director, Europa Caravans**
